Marktkommentar

Der S&P 500 und der EuroStoxx 50 beendeten den November insgesamt weitgehend unverändert, nach einem Rückgang von rund 4 % zur Monatsmitte und einer anschliessenden Erholung in der letzten Woche. Der VIX stieg im Zuge der Korrektur kurzzeitig auf 26, was vor allem auf Sorgen über überhöhte Bewertungen von Aktien mit starkem Bezug zu KI zurückzuführen war. Robuste, besser als erwartete Ergebnisse von Nvidia und anderen Unternehmen mit signifikanter AI Exposure brachten Entlastung an den Finanzmärkten und halfen den Indizes, auf das Niveau vom Monatsbeginn zurückzukehren.

Portfolio

Im November hielten wir eine Exposure von fast 100 %, bei einer durchschnittlichen Optionslaufzeit von rund 15 Tagen. Unsere Allokation blieb stabil bei etwa 85 % S&P 500 und 15 % EuroStoxx 50. Zur Monatsmitte nutzten wir die Gelegenheit, einen Teil unserer Optionen zu rollen, was sich positiv auf die Performance auswirkte. Wir rollen dabei hauptsächlich Positionen, deren Ausübungspreise 5 bis 10 % unter dem aktuellen Spotpreis liegen, mit einer durchschnittlichen Laufzeit von 20 Tagen.

Ausblick und Portfolio Positionierung

Insgesamt bleiben wir angesichts der aktuell hohen Bewertungen an den Aktienmärkten vorsichtig. Mit unserer derzeitigen Positionierung wollen wir opportunistisch von kurzfristigen Volatilitätsspitzen profitieren, wie Mitte November, und gleichzeitig das aktive Rollen der Positionen zur Erhöhung der Prämienerträge fortsetzen, bei insgesamt konservativerer Strike-Wahl.

There is no guarantee of trading performance and past performance is not necessarily a guide to future results. In particular the results and graphs above may contain hypothetical performance results. Hypothetical performance results are based on various assumptions and may have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown; in fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk of actual trading. For example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect trading results. Hypothetical performance results are shown for illustrative purposes only and are not to be relied upon for making investment decisions. Clients must base their decisions on their own understanding of the strategy, the service or product and market views.

DIVAS Asset Management AG may act as a hedging advisor. Any hedging activities carry substantial risks. Hedging can involve short-selling of asset classes with unlimited downside risks in certain cases. Prospective clients hedging their portfolio might miss significant upside in the assets they hedge. Furthermore, there is always a bias between the assets being hedged, and the results of the hedging strategy (it is not possible to obtain a continuous hedge with a fix correlation of -1 over time). This bias typically increases in situation of market dislocations, as the assets being hedged are typically less liquid than the instruments used for the purpose of hedging these, and the losses of the assets being hedged become higher than the gains of the hedging strategy on the back of an increase in the liquidity premium.
